

INTRODUCING POINT

Point is a Plant/Platform Operations Productivity tool used by both operators and technical staff to support onshore and offshore activities. POINT provides the following benefits:

Empowered Workforce;
allowing "eyes on, hands off"

Optimize productivity time with
tasks and schedule automation

Early risk identification with real
time monitoring & tracking
of task progress

POINT Integrated Modules

While POINT modules can function independently, their true efficiency is realized when used in combination.

POINT WEB-BASED APPLICATION

Configurable filter & data points

Personalised Dashboards

Real-time Data

New Look & Feel

POINT MOBILE APP

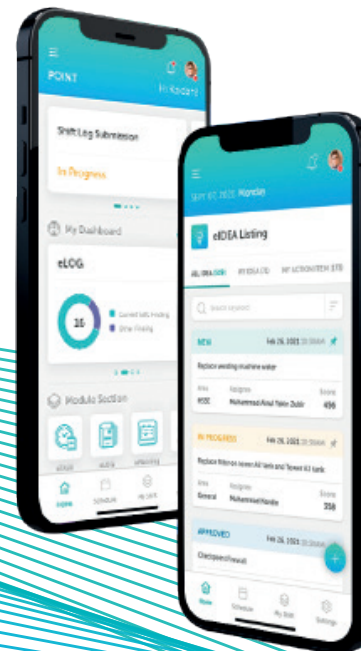

Offline Mode Feature

Simplified UI

Update Real-Time Data

Assign & Track Your Task

Portable & Easy on the Go

USERS FEEDBACK

Compliments Work Process

"POINT compliments our Operate Facility Work Process (OFWP), which is practiced in day-to-day plant operation activities. We are heavily dependent on POINT to **manage our shift activities** and shift manning."

Sahdan B Daim
Activity Coordinator Production Plant

Plant Information One Stop Centre

"It is a digital tool that serves as a one stop centre for everyone to access relevant plant information. This tool can support business units in **achieving their Overall Equipment Efficiency (OEE), Plant Utilization (PU) and Production Volume (PV) targets.**"

Ahmad Suhaimi
Operation Manager

Improve & Sustain Equipment Availability & Reliability

"Operation EBC checklists can be automatically generated in the eTASK module. As EBC is part of the asset reliability program, POINT's condition-based monitoring analyses ways to improve and **sustain equipment availability and reliability** while ensuring safe plant operations."

Jeffrendy Zulendy
Technician (MT - Process Operations)
